In 1994, it was split into two separate products: AutoCAD Map and AutoCAD Desktop. In addition to the new products, the appearance of the program was significantly updated. It has since returned to the single application format. AutoCAD Map was first released in 1993. Its scope was to provide a centralized way to view and edit map data, including military maps, navigation charts, and survey maps. From its inception, AutoCAD Map was primarily used with AutoCAD, and it was at one time thought to be a future replacement for AutoCAD. This was based on the integration of AutoCAD Map and AutoCAD. AutoCAD Map continues to exist, and is available in both AutoCAD and AutoCAD LT. The only notable difference between the two is that AutoCAD LT does not include the AutoCAD Map program. In 1995, AutoCAD Desktop was added. It is an operating system-independent CAD application for use with a variety of drawing tools. This edition of AutoCAD was not available for the Macintosh platform. AutoCAD LT was added in 1996, and was the first AutoCAD release that provided compatibility with the Macintosh. This edition of AutoCAD was not available for the Windows platform. AutoCAD Map and AutoCAD Desktop were combined into Auto

Unix-like operating systems: Autodesk built an application framework called 'Fusion Application Framework' or 'FAF' which is used for creating new AutoCAD For Windows 10 Crack applications. With it they have created the utilities 'Autodesk Cara' and 'SmartCAD'. In 2006, Autodesk released the 'Auburn' package, which contains the AutoCAD source code in C#. In addition, in Autodesk's Forge development environment for web application, a LISP interpreter has been incorporated. This interpreters allows for the creation of extensions for programs such as AutoCAD. Before AutoCAD release 16, only .NET was available, but it was too restrictive. This version brought a new LISP based system called Visual LISP. It is a very fast, rich and powerful programming language that is designed to be used in a wide variety of applications, including AutoCAD. AutoLISP is also the primary language used in AutoCAD to program extensions. Visual LISP is also known as 'VisualStudio script'. The Visual LISP IDE contains a full-screen editor, cross-editor hot-keys and library search and navigator. Visual LISP's key features include support for modules, packages and templates, integrated debugging and a full debug command-line system. AutoCAD for .NET is based on AutoLISP. It is a set of interfaces that allow programs to be written in Visual LISP, and run directly in AutoCAD, including Visual LISP's OLE automation. This allows for dynamic linking to external libraries. Another LISP based language AutoCAD supports is VBA. VBA is not only for use in AutoCAD. It is also used in PowerBuilder applications. VBA also allows dynamic linking to external libraries, as it is a .NET based language. Autodesk adds two features to VBA: the ability to call COM objects and to embed graphics into VBA scripts. The very last option to build extensions in AutoCAD is with ObjectARX. It has a wide variety of programming options, but also has its drawbacks. The main problem with it is that ObjectARX requires the use of C++, which many developers do not know. In addition, developers have to learn a new syntax for ObjectARX and a new set of programming tools. However, once written the script cannot be
